What is N-PAcT?

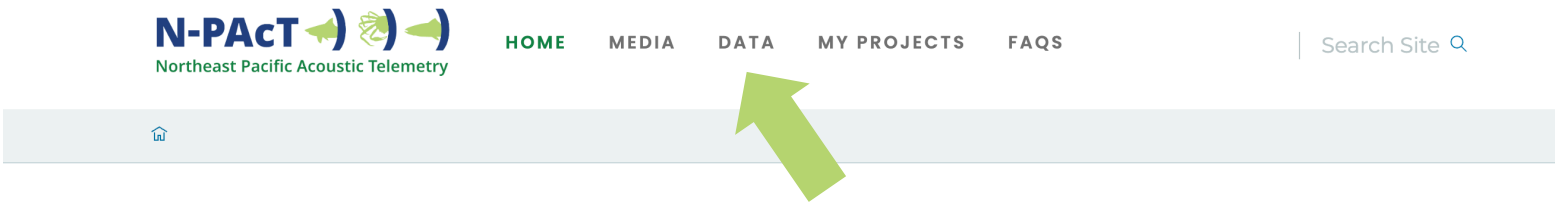

Northeastern **P**acific **Ac**oustic **T**elemetry (N-PAcT) Node is a regional network established in 2025 to unify acoustic telemetry data collection and to facilitate collaboration among researchers tracking marine and anadromous animals from Alaska, USA, through Baja California, Mexico. Our aim is to shift research focus from localized efforts to a cohesive, international scale to better understand aquatic animal movement.

N-PAcT is part of a larger, global network called the Ocean Tracking Network (OTN). As a member of N-PAcT, your tags and receiver networks have the capacity to extend beyond local deployments, providing you with more robust data and the

Identify the project schema you want to upload data to

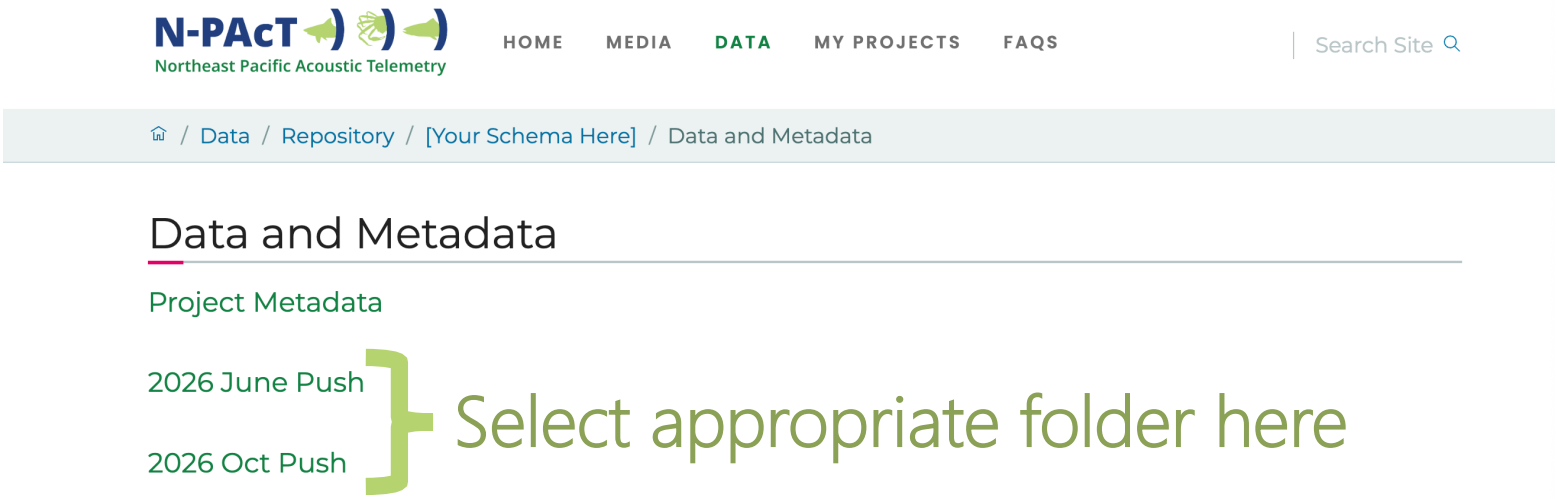

Repository

[Your Schema Here]

Several folders should appear in your schema, click “Data and Metadata” folder

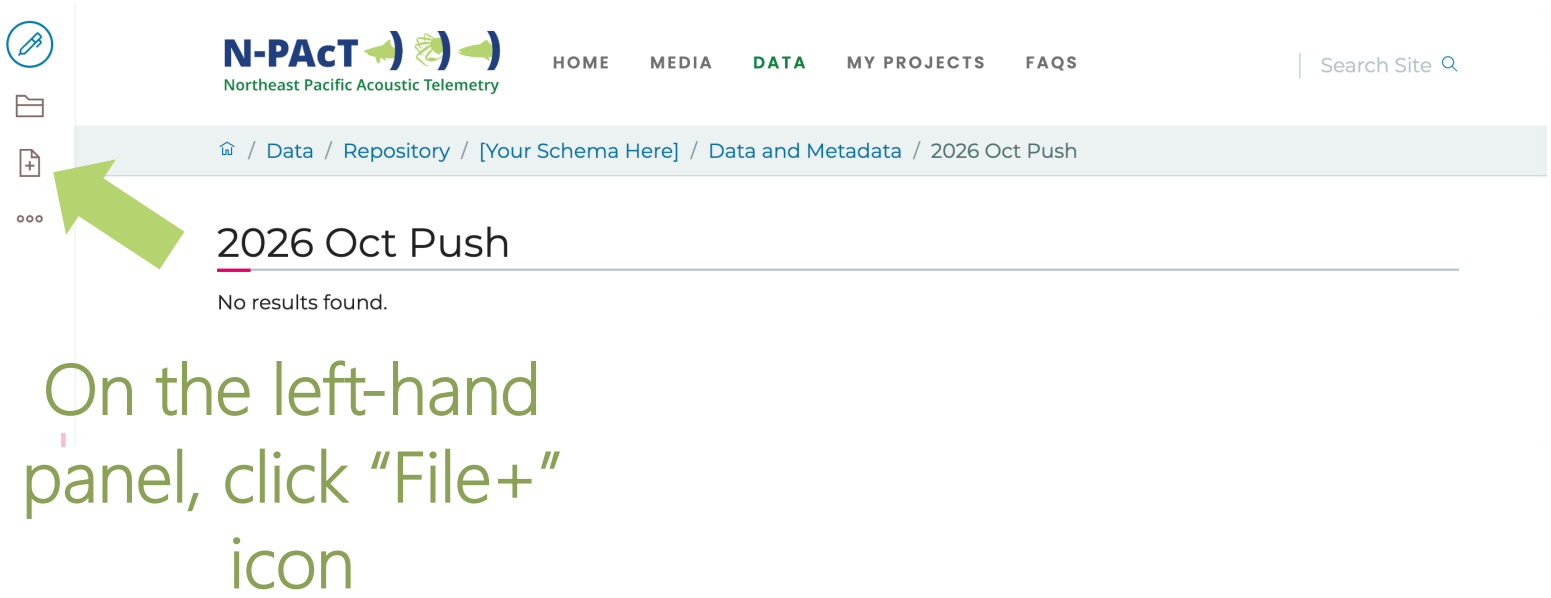

Sub-folders will appear, click on the appropriate folder based on next, upcoming push date

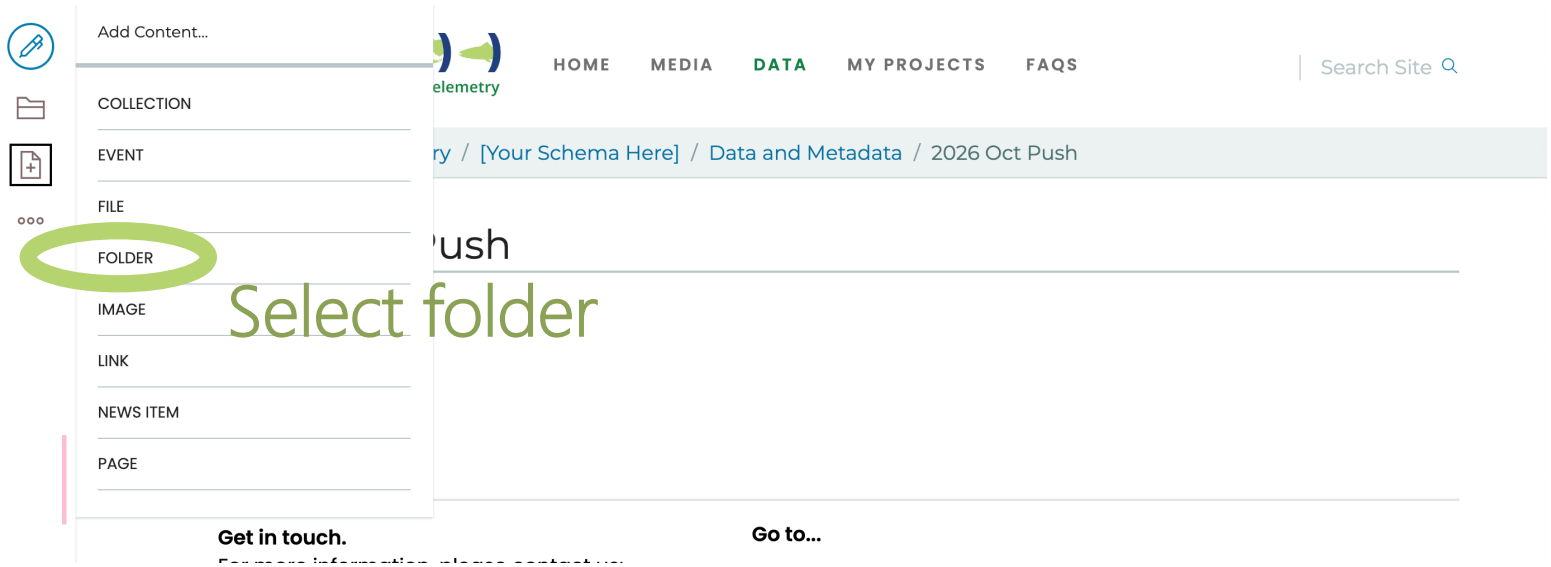

If unsure, contact your node manager.

Note, data you would like included in the upcoming push is based on folder date. For example, data should be submitted to the "2026 Oct Push" folder for activities occurring between mid-June to Oct 5th , which is N-PAcT's receipt cutoff date.

Once you have selected the correct folder, it is best to create a new sub-folder to submit data

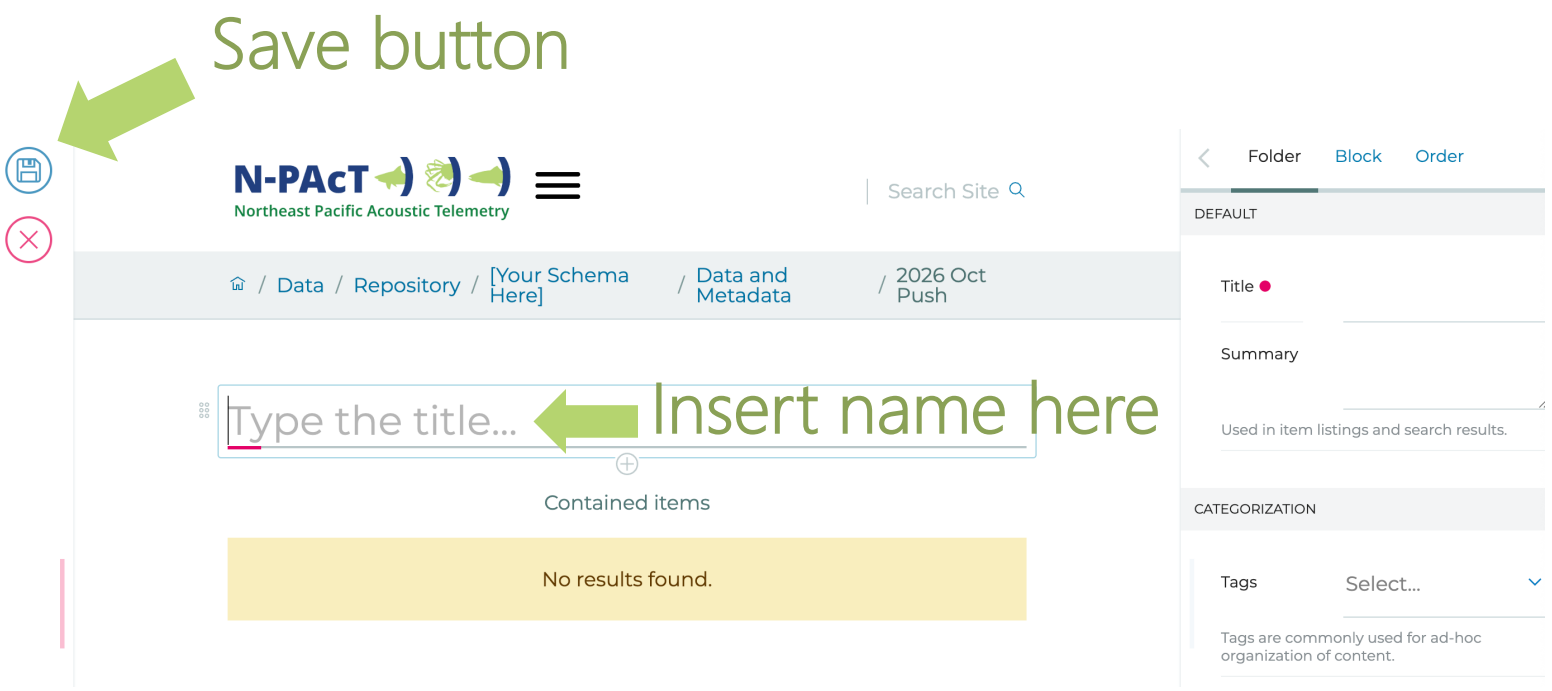

On the left-hand panel, click "File+" icon

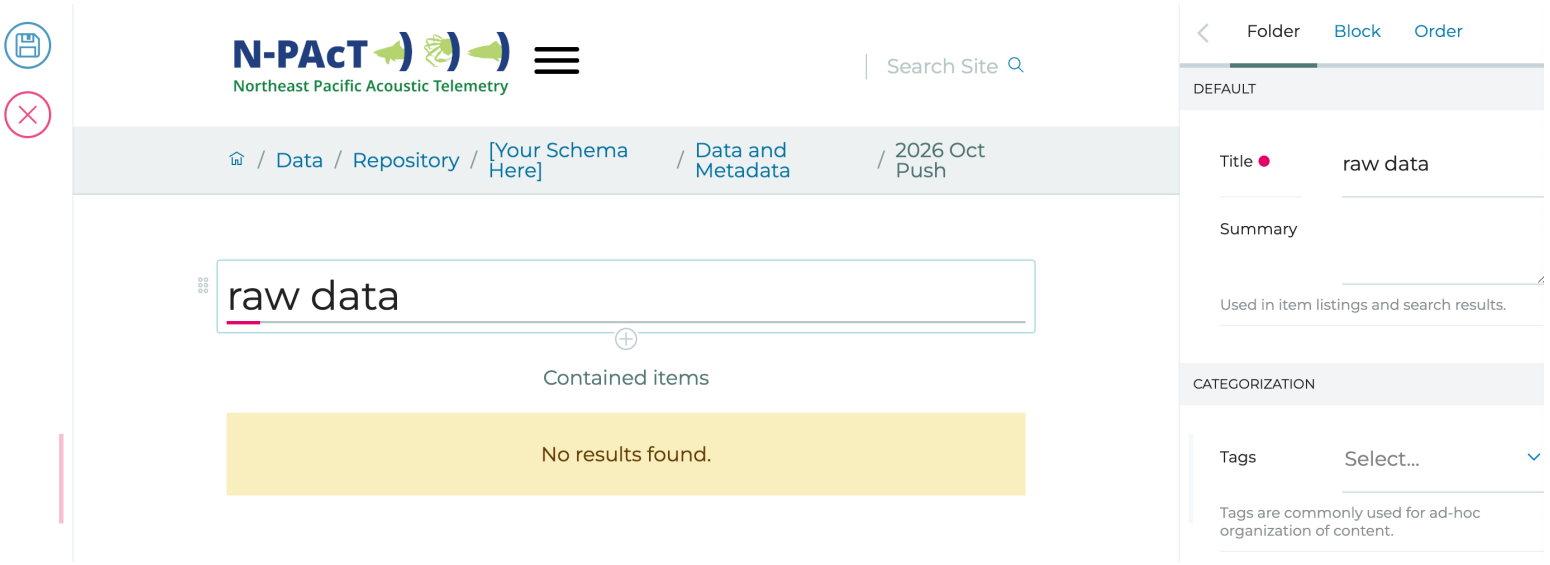

Select folder

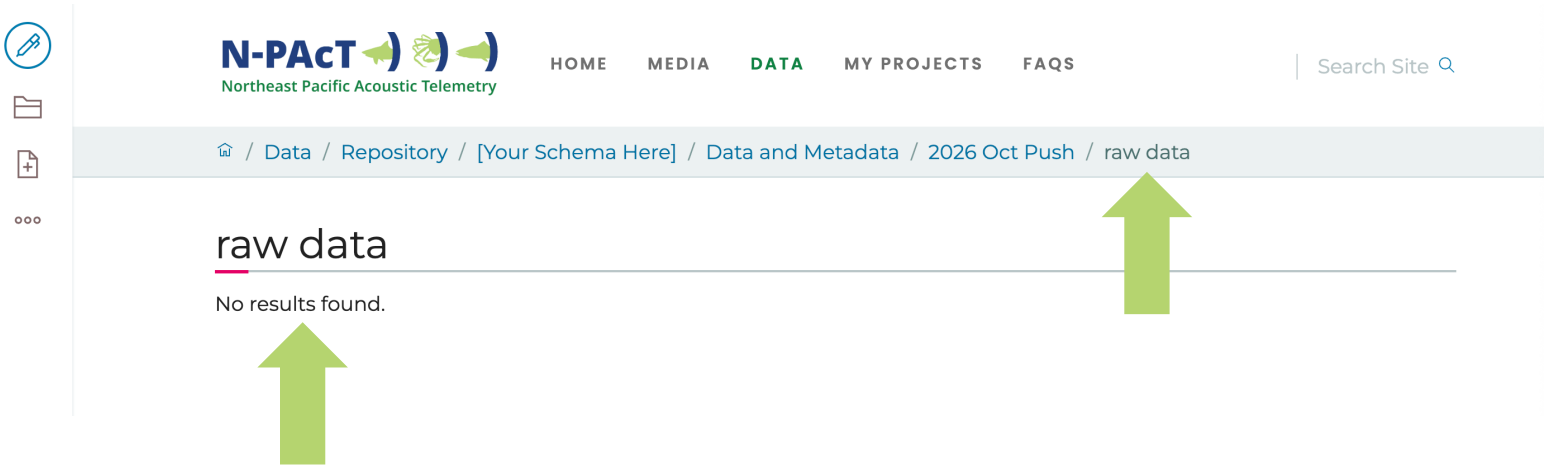

Give a name to your newly created folder and click the “Save” icon

Example of folder name

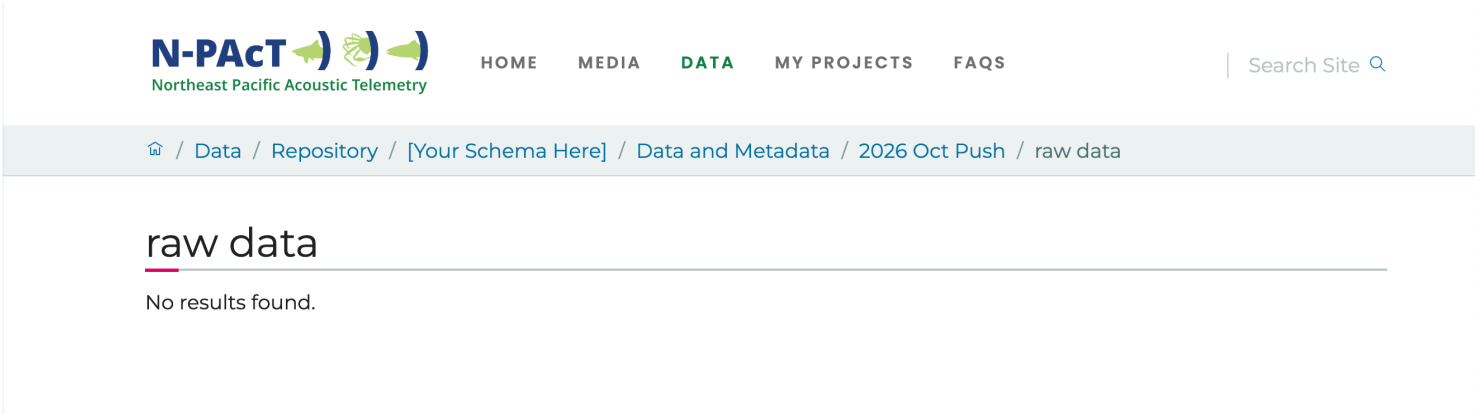

New folder now appears within the “2026 Oct Push” folder

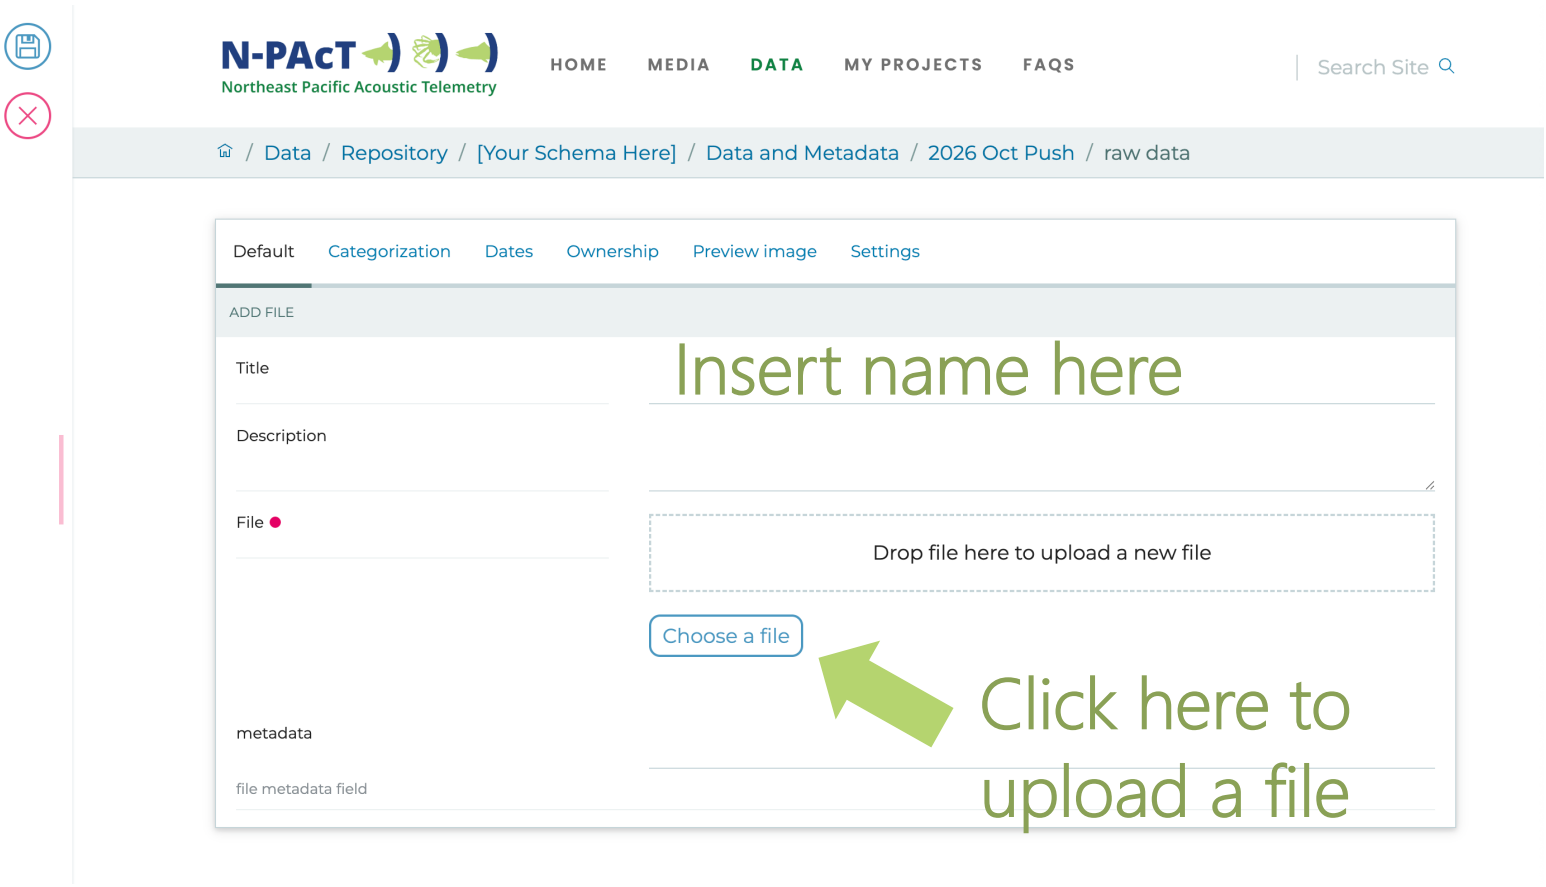

To add files to your new folder, click on the "File+" icon

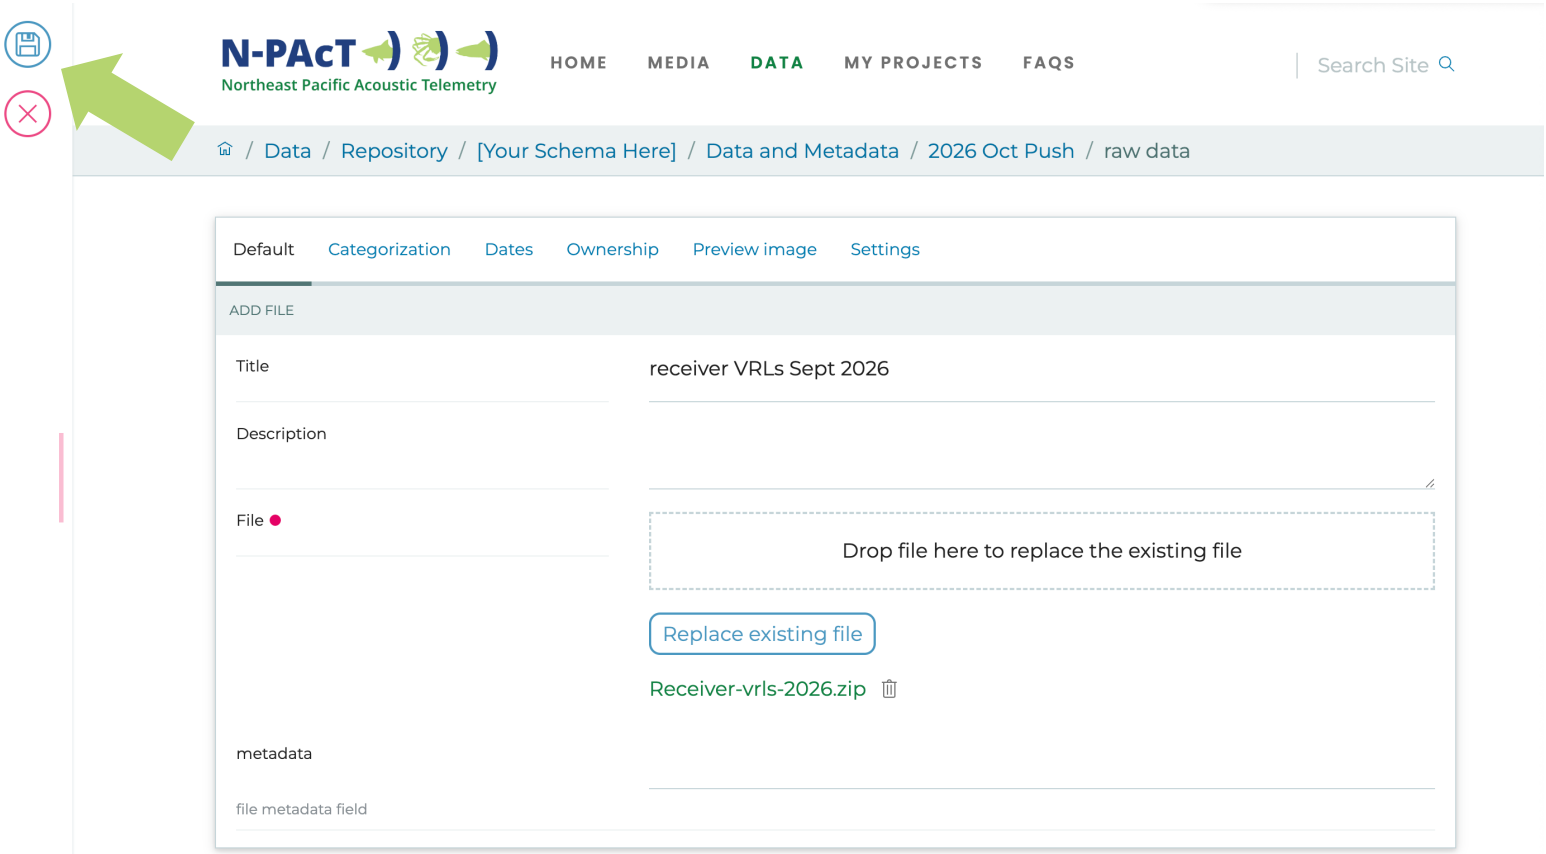

This window will pop up. Give your file a title, description (optional) and then click “Choose a file” to upload data

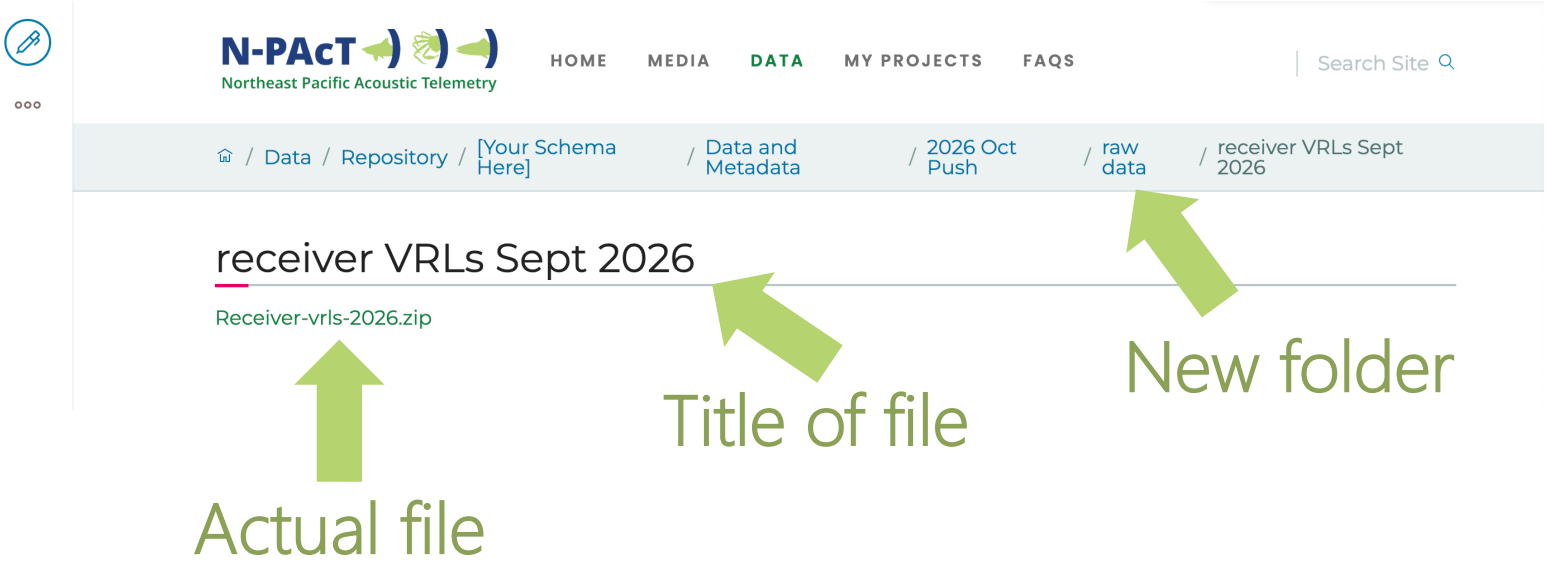

NOTE: if you are wanting to upload more than 1 file at a time, they need to be as a .zip file, otherwise this process will have to be repeated for each, individual file

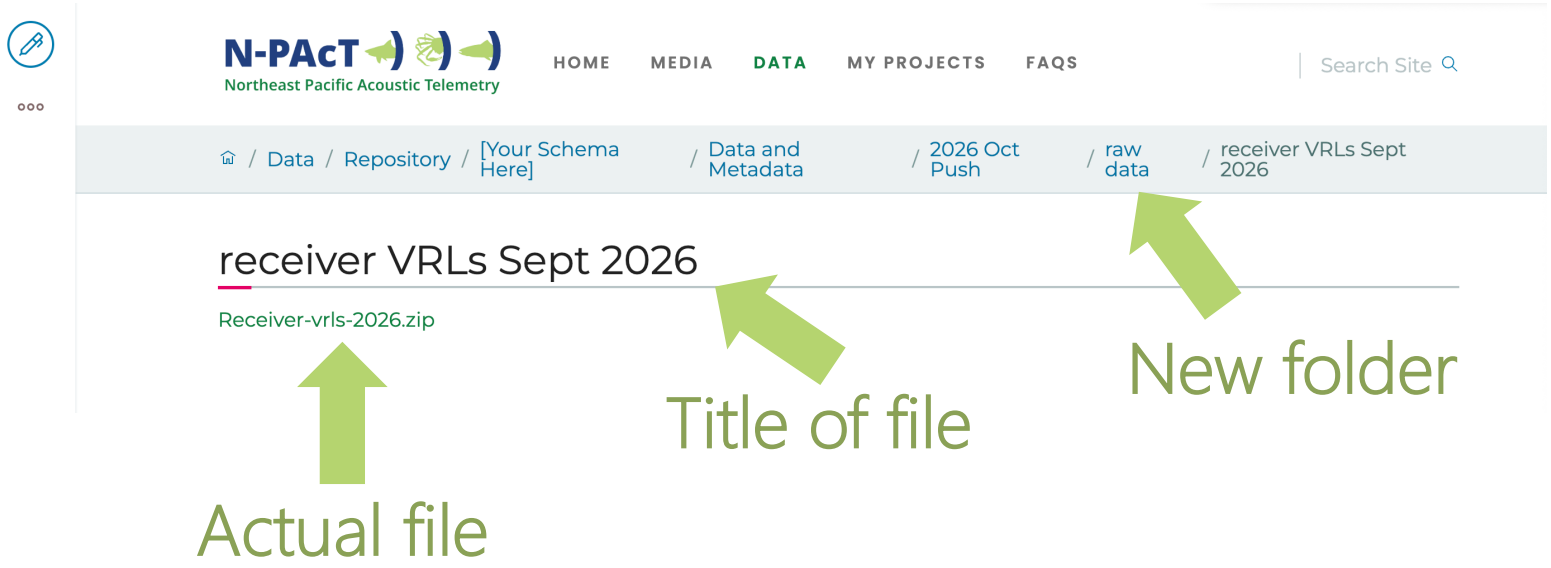

Example of title with attached zip file. Click “Save” button when done

Uploaded data now appears in your newly created folder

Uploaded data now appears in your newly created folder

Repeat process for as many files as you would like to upload
