What is N-PAcT?

Northeastern **P**acific **Ac**oustic **T**elemetry (N-PAcT) Node is a regional network established in 2025 to unify acoustic telemetry data collection and to facilitate collaboration among researchers tracking marine and anadromous animals from Alaska, USA, through Baja California, Mexico. Our aim is to shift research focus from localized efforts to a cohesive, international scale to better understand aquatic animal movement.

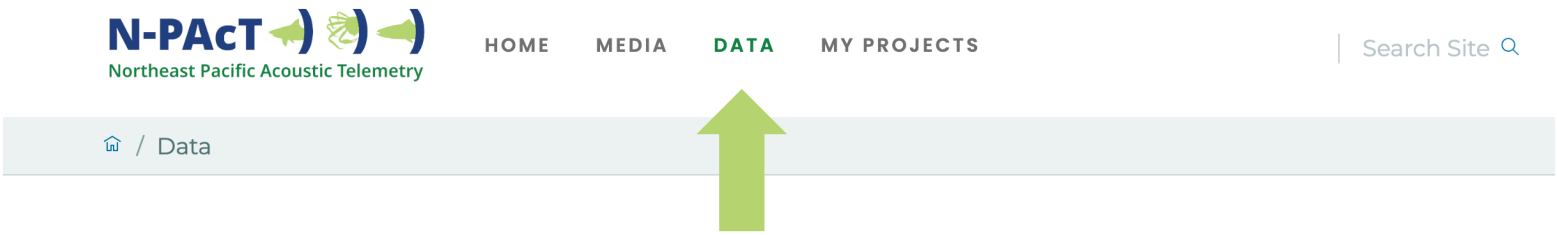

N-PAcT is part of a larger, global network called the Ocean Tracking Network (OTN). As a member of N-PAcT, your tags and receiver networks have the capacity to extend beyond local deployments, providing you with more robust data and the potential for future collaborations.

If you are a current user-member of N-PAcT, the Plone (i.e. this site) is where you can exchange data with the node manager. The Plone also serves as a secondary back up for data storage as well! Please contact your current node manager at npact@aoos.org to help set up your account for your acoustic telemetry project.

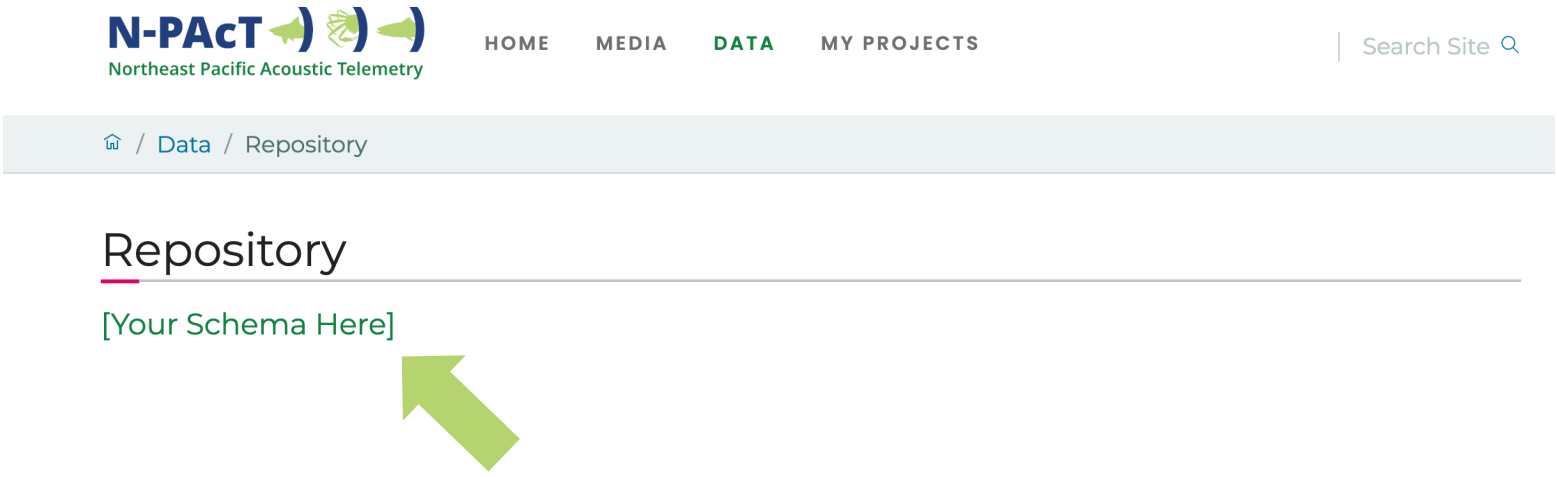

If you are not a current user, please visit our website to learn more information.

Getting Started

Click on DATA tab at top of window

Identify and click on your project schema

Several nested folders should be visible

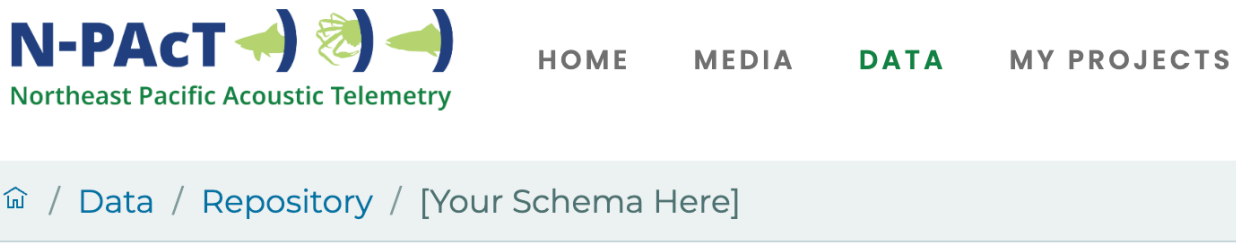

[Your Schema Here]

Data and Metadata

Detection Extracts

Equipment

To submit new data, click on the “Data and Metadata” folder

Folders are organized by push date. Please submit new data to whichever folder corresponds to the NEXT data push.

If you are unsure, check our website https://npact.aoos.org/ or contact the node manager at npact@aoos.org

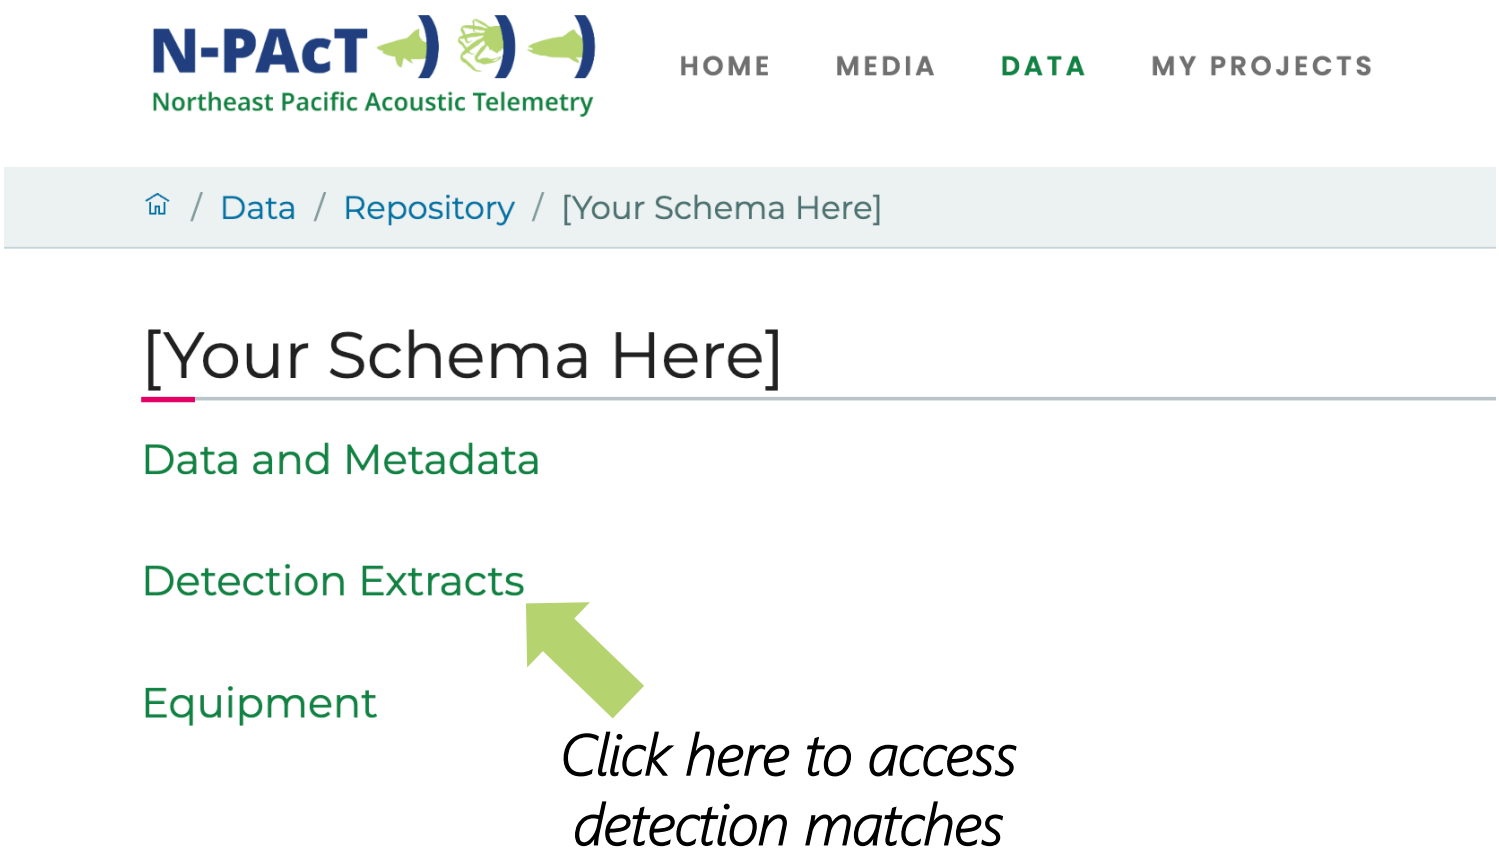

Data and Metadata

Project Metadata

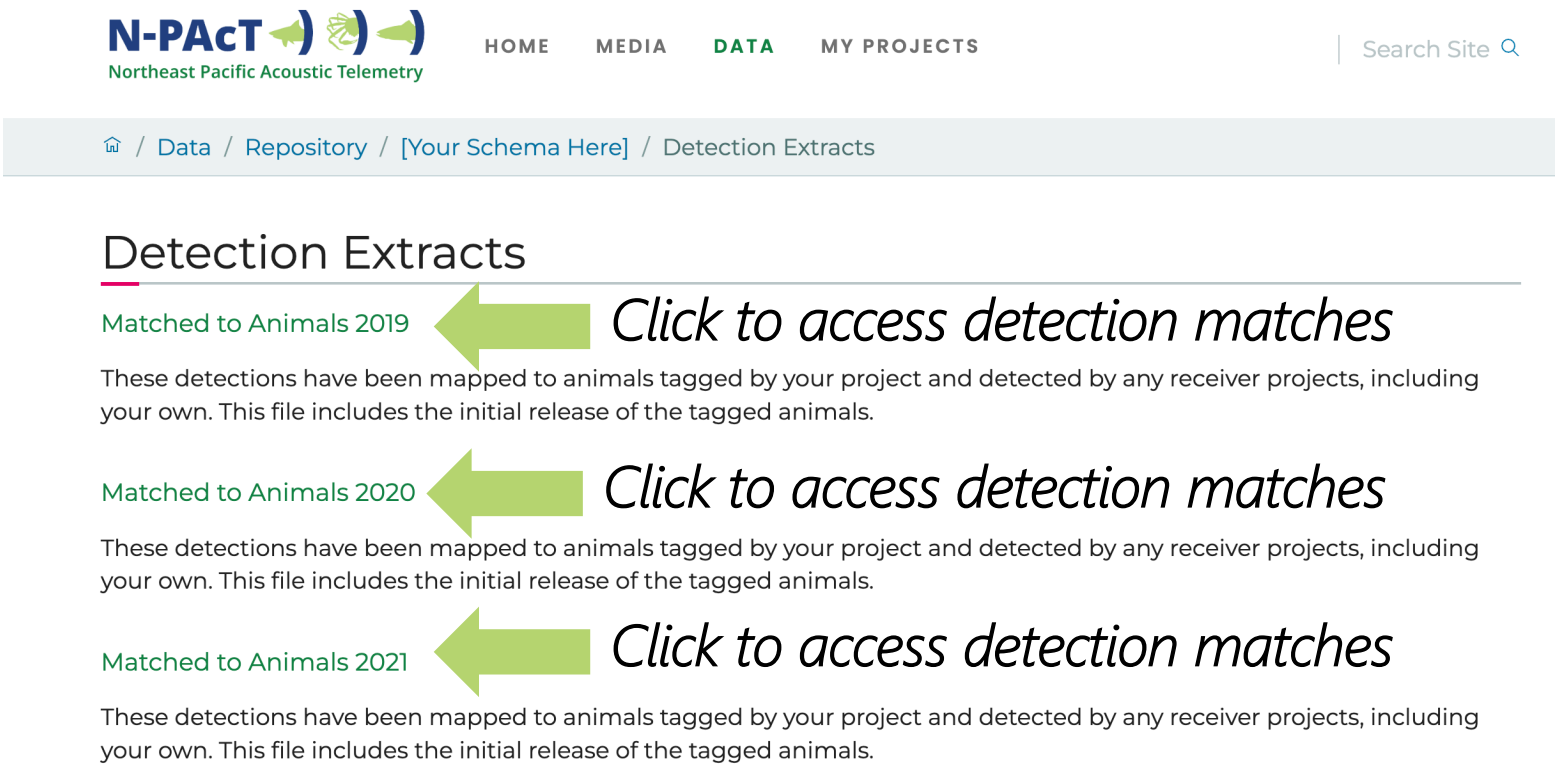

2026 June Push

2026 Oct Push

To access your detection cross matches, click on the “Detection Extracts” folder

Detection cross-matches will be organized by year of detection

Click on .zip file to download detection extracts
